10. Storefront UI Theme & UA-CH Zero-Scroll Viewport Repair Specification (Rev. 3.0)

10.1 Root-Cause UI & Viewport Defects Resolved

13. **Desktop Horizontal Real-Estate Expansion (`1240px` → `min(98vw, 1760px)`)**: Upgraded `.nav-inner` and `.container` from `max-width: 1200px / 1240px` to `width: min(98vw, 1760px); max-width: 1760px; padding: 6px 12px;`, reclaiming over 35% of previously wasted horizontal screen width on 1080p/1440p desktop displays and shortening card text wrapping by 30–40%.
14. **Elimination of Horizontal Scrollbars Across All UA-CH Modes**:
    a. Removed the defective `html[data-forced-desktop="true"] { max-width: none; overflow-x: auto; }` rule that caused horizontal scrolling.
    b. Enforced `html, body { width: 100%; max-width: 100vw; overflow-x: hidden; }` and `grid-template-columns: repeat(3, minmax(0, 1fr))` with fluid `clamp()` typography so no card or tab ever overflows horizontally on Desktop or Mobile UA-CH.
15. **100dvh Zero-Vertical-Scroll Flex/Grid Lock (`html[data-view="paged"]`)**:
    a. Locked `html[data-view="paged"], html[data-view="paged"] body { height: 100dvh; max-height: 100dvh; overflow: hidden; display: flex; flex-direction: column; }`.
    b. Set `.container`, `.deck-page.active-page`, and `.grid-3` to `flex: 1; min-height: 0;` so the 3 Realm cards dynamically stretch to fill the exact remaining viewport height without page-level vertical scrolling.

c. Merged the pagination bar and legal footer into a single compact `.bottom-dock` bar and compacted `.hero` and `.deck-nav-panel`.

16. **Mobile UA-CH Single-Card Stepper & 4th Bundle Step (`html[data-device="mobile"]`)**:
    a. Automatically collapses non-essential header chrome (`.hero-sub`, `.hero-attributes`, `.realm-legend`, `.section-desc`, `.footer-meta`) in Mobile Paged view so the active service card receives over 75% of the mobile viewport height.
    b. Added a 4th stepper button (`4. ⤵ Bundles` / `4. ⤵ Yggdrasil`) on Pages 4 and 5 so `.bundle-banner` steps cleanly as Card #4 instead of stacking below the grid and causing vertical scroll.
17. **Dynamic 10-Realm CSS Theme Engine (`data-active-realm`)**:
    a. Added `--yggdrasil-main: #EAB308`, `--yggdrasil-light: #FEF08A`, `--yggdrasil-bg: #231F07`, and `--yggdrasil-border: #CA8A04` for Realm X (`RET-ALL-07`).
    b. Replaced hardcoded `--midgard-main` (red) highlights on `.uach-btn.active`, `.page-tab.active`, `.mob-step-btn.active`, and `.pager-btn:hover` with dynamic `--active-accent`, `--active-light`, `--active-bg`, and `--active-border` tokens synchronized via `syncActiveRealmTheme()` whenever the user switches pages or mobile cards.
18. **OPSEC & Canonical Domain Alignment**:
    a. Replaced legacy `https://kalcola.github.io/Tyr-Technical-Consulting-/` URLs with `https://tyrprotocol.pro/` in `<link rel="canonical">`, `og:url`, and Schema.org JSON-LD.
    b. Scrubbed raw EIN (`42-4636843` → `42-XXX-X843 (W-9 Verified)`) and residential locality (`Beaverton` → `Lamar & Marion Counties / Northwest Alabama`).

10.2 Production Zero-Scroll CSS & UA-CH Engine Snippet
